

Curing Light

The SpotCure-B™ is a bench top UV adhesive curing light that employs the latest L.E.D. technology to produce high intensity UV light in the UV-A spectrum. This curing light is as easy to use as a soldering station. A "hands-free" sensor turns the light on and off when the probe is removed and placed back into its holder. The unit produces an audible signal at the end of each selectable curing cycle. Curing cycles are selectable at 10, 20, and 40 seconds and a manual selection provides continuous operation.
