

Inlet Filter

The CORCOM EJT series filter is a high performance, two stage, inlet filter, with attenuation performance up to 1GHz. The EJT Series attenuates noise at much higher frequencies than traditional inlet filters, currently available to design engineers. It utilizes IEC320 input connectors with maximum rating of 20A and can attenuate up to 14db in common mode and 23dB in differential mode at 1GHz. The EJT Series is available with 1/4 in. FASTON terminals or wire leads in a flange mount configuration.
