

Constant-Torque Hinges

The MH20 and MH40 constant-torque hinges are ideal for controlling motion in applications that involve positioning an object through 360 degrees of rotation. Designed to provide smooth action and a quality feel, the hinges deliver a useful life of 20,000 cycles with no backlash and a typical spring-back of less than 1 degree. Available in load capacities that range from 1.7 lb-in. to 36.5 lb-in., the hinges feature engineered plastic housings that provide corrosion resistance in applications such as medical cabinets.
