

Distribution Valves

Pressure rated up to 500 psi (33 bar), these large manual rotary distribution valves have chemically inert PTFE wetted parts, sturdy PEEK casings, and KEL-F rotors. There are 5, 7, 9, and 11 port versions for 4-way, 6-way, 8-way, and 10-way distribution, as well as 6 and 10 port versions for loop injection. Port connections are standard 1/4 - 28 UNF threads and port sizes are standard 1.5 mm. Each port is identified by a simple click-stop.
