

Miniature Slide Switches

The EG1260 series of miniature slide switches features two optional SMT mounting configurations and three slide actuator sizes for a wide variety of printed circuit board applications. Designed with an electrical life of 10,000 cycles, the SPDT EG1260 series is rated at 0.3 A at 4 VDC with an operating temperature ranging from -10°C to +60°C. For maximum rigidity, switch models EG1260AS, BS, and CS have four grounded mounting tabs that can be soldered to the printed circuit board. All models are designed with chamfered locating pins for quick and accurate mounting using automated machinery.
