

Photoelectric Sensors (1027)

With patented technology, Osiris® photoelectric sensors improve productivity while saving time, space, and purchasing hassles. The sensors feature "multimode" technology that allows a single sensor to perform the functions found in as many as five different modes of sensors. These functions, including diffuse, fixed-field, diffuse with background suppression, polarized retroreflective, and thru-beam, are selected with the push of a button. The sensors also feature light operate and dark operate functionality via the push button.
