

Test Assemblies

The GORE® 153 PHASEFLEX® 110 Test Assemblies provide excellent phase and amplitude stability with flexure over a wide temperature range. With performance through 110 GHz, they are also flexible, with virtually no springback, allowing for easy test set-up and minimizing stresses on devices under test, probe tips, and adapters. The assemblies can be flexed, reformed, or repositioned while minimizing the chance of damaging the assembly or test components. Internal ruggedization makes these assemblies crush and torque resistant, while still maintaining a small outer diameter of only 0.165-in.
