

## X-Ray Inspection Software

Both the qfp|module and the mlf|module are fully automated measurement solutions and eliminate the need for an operator to determine pass/fail criteria. Each module provides critical features that measure QFP solder joints found on flat ribbon, L, gull wing lead components, and fine pitch of micro lead frame devices (MLF). Each module is based on the company's open algorithm image software, XE<sup>2</sup> (X-ray image Evaluation Environment).
