

## Filling and Capping System

The FMB210 monobloc vial filling and capping machine enables pharmaceutical and biotech filling operations to achieve a 50% increase in output capacity with maximum flexibility within minimum floor space requirements. It is specially designed for filling vials, insertion of lyophilisation or injection plugs, and overseal capping of aluminum caps. With an output of up to 85 units per minute, the FMB210 is ideal for sterile filling of liquid volumes between 0.1 and 100 ml with an accuracy of  $\pm 1.771\%$ .
