## **Lead Screws (1375)**

Comprised of small diameter, precision rolled, lead screw assemblies, the Mini Series provides reliable precision motion control at up to 1/10th of the cost of miniature ball screws. Built to last hundreds of millions of inches of travel without requiring external lubrication, maintenance, or adjustment, the Mini Series exhibits excellent performance, enabling new designs and inventions to be manufactured at previously unattainable sizes and costs. The series is offered in anti-backlash and general-purpose lead screw assemblies, in the NTB, NTG, and B-Series.
