

Foams

This family of foams is designed for medical skin contact applications. The foams are specially formulated from the PORON, BISCO and Polyolefin lines, and are uniquely designed to meet internationally recognized skin contact ratings. They can be used in a variety of medical devices where the body makes direct contact. PORON Medical Urethanes, BISCO Medical Silicones, and Rogers Medical Polyolefins are fungal resistant, PVC, latex, and solvent free, biocompatible, and pressure relieving while offering lasting comfort and durability.
