

Machine Tools

The Tornos “DECO” Series of machines are popular in the medical industry. Many orthopedic, arthroscopic, dental, and a host of other medical components can be completely machined quickly in one setup on the equipment. The DECO Series ranges in size, accommodating diameters from 7 mm to 32 mm. The company also offers dedicated programming software, and as of last September, the TB-DECO program can interface with PartMaker SwissCAM software. Integrating these two technologies allows Tornos DECO users to create and validate CNC programs more easily, thus speeding programming and reducing setup time even further.
