## **Psychrometer**

Designed for medical design applications, the SuperHeat Psychrometer features a large display that allows for the simultaneous display of three parameters: relative humidity with ambient air temperature, plus dew point or wet bulb or external temperature. Incorporating the inputs from two external Type K probes, T1 and T2, differential measurements can be displayed as T1-T2, air-temperature-T1, and T1-dew point.

&#149 Built-in memory: 99 data points &#149 Built-in RS-232 interface &#149 Real-time clock &#149 Auto power off
