

## UV Cure Systems

The SuperSpot MAX HP has been coupled with the company's proprietary extreme intensity FibreFire UV fiber delivery products to create a line of matched precision UV cure systems for automated & semi-automated medical applications. These integrated systems deliver in excess of 50 watts of intensity (>30 watts UVA) to precision placements allowing virtually instant adhesive and coating cures. These systems eliminate oxygen inhibition problems associated with many free radical photoinitiators and produce higher tensile bonds with less surface tack.
