## **Machine Vision System**

The Checker 101&#151the first member of the new Checker family of vision sensors&#151is a simple-to-use and inexpensive sensor that can visually detect the presence of items during the manufacturing process. Unlike multi- purpose vision systems that can be programmed to perform a wide variety of tasks, each model in the Checker family will do only one thing, but it will do it exceptionally fast and well. It was also designed from the ground up to be far simpler to use than traditional vision systems.
