

## Silicone Cable Jackets

STERILENE silicone cable jackets can be specified on precision interconnect cable assemblies such as BASIS cable assemblies as well as custom cable assemblies. With STERILENE silicone cable jackets, a desirable smooth feel, as well as flexibility and strength are maintained even after repeated autoclave sterilization. This latest innovation in material technology helps eliminate the surface tackiness found in conventional silicone that is uncomfortable to touch, catches on linens, and attracts lint and dirt. For the end-user, cables jacketed in STERILENE silicone look cleaner and feel smoother than cables jacketed in conventional silicone materials.
