

Custom Molded Tubing Parts

Custom molded tubing parts, manufactured from PVC-based plastisol, address a number of problems that can occur with typical tubing and fitting connections, such as leaks, labor costs, flexibility, and uneven flow. Each part is custom engineered and manufactured to a customer's specific need. The custom parts eliminate leak potentials, reduce the cost of labor to assemble the tubing and fittings, offer unimpeded fluid or air flow for better performance, improve aesthetics, save space in tight areas, and reduce the overall weight.
