

## Fluid Control Pump

**Booth 3139** The Model STRH pump is for precision fluid control in analytical and process instrumentation. It integrates the company's patented CeramPump valveless piston pumping principal with precision stepper control. The piston stroke displacement is adjusted using an easy-grip flow control ring graduated in 450 divisions resulting in n accuracy of 1% or better. It is ideal for applications that require both frequent and highly accurate changes in dispense volumes or flow rates.
