## Release Coatings

Non-silicone release coatings are designed for applications where a residue cannot be left behind that might contaminate a material or process. Available on a variety of films and papers up to 82 in. W, these non-silicone release coatings will not change the properties of an adhesive.

• Offered on films: 0.25 mil. To 30 mil. thick

• Offered on papers: tissue to polypropylene-coated Kraft 44 to 100# weight
