

Wireless LAN Connectivity

The TROY500 and TROY505 family of serial device servers enable virtually any device with a serial port to connect to a wired or wireless network for remote monitoring and control, making it ideal suited for the medical industry. The 500 series offers RS-232, RS-422, or RS-485 serial modes, while the 505 series adds the MODBUS protocol used in many industrial applications. Both models can be ordered with a wireless LAN option, which allows connection to 802.11b wireless networks in addition to the 10/100BaseTX Ethernet.
