Camera (1909)

This extremely high-resolution area camera is designed for capturing images in the 900 nm to 1700 nm waveband range. The solid state SU640SDV-1.7RT InGaAs SWIR Area Camera features a 640 x 512 pixel resolution on a 25 micron pitch with room temperature operation and built-in anti-blooming properties. It contains the company's own foundry-made Indium Gallium Arsenide detector that offers high sensitivity and resolution in the shortwave infrared wavelength spectrum.
