

Magnetic Absolute Encoder

The MagRes magnetic absolute encoder line is specifically designed for medical equipment and devices requiring extremely precise direction and position monitoring. Low cost, compact, and lightweight, they are ideal for imaging systems where they replace analog potentiometers, delivering fluid, smooth movement over the life of the machine. The encoders are available in single and multi-turn versions. Both versions are available in standard 42 mm and 58 mm housings, and operate optimally at -20°C to 85°C.
