

Automation Controller

The Blue Fusion 5200 controller is a high performance programmable automation controller designed for industrial discrete and process control applications. It combines the features of a PLC, motion controller, and PC into a small and rugged DIN rail mountable package. The controller can be used in a stand-alone configuration or it can be easily networked via its serial and LAN connections.

• Built-in web server

• 48 analog or digital I/O points

• Six axes of motion control
