

Measuring System

The Quick Vision Apex Series CNC vision measuring systems provide the high levels of accuracy (1.5 + 3 L/1000) and speed (1000 mm/s²). As a result, they offer significant

productivity improvements for non-contact measurement of items such as IC chips, IC packages, hybrid chassis, lead frames, and many types of precision machined, molded, and similar parts. The Quick Vision Apex platform is driven by QVPAK software, offering a wide range of choices in accuracy levels, optical/oblique illumination systems, and measuring ranges.
