

## Rocker Switches

The MLW series of lighted, snap-in, rugged, illuminated rocker devices feature a stainless steel housing to prevent corrosion, unique stainless steel retaining clips to ensure secure mounting over a diverse range of panel thicknesses even when exposed to vibration, and an interlocking actuator that prevents switch failure due to jamming or window locking. In addition, the switches offer built-in protective covers that shield the contacts from dust, while epoxy sealed solder lug terminals lock out flux, dust, and other contaminants.

&#149 Actuators available in rocker or paddle models

&#149 Two different bezel options
