

IV Filters (2109)

Company offers a complete line of IV filtration products. The IV Express is a 0.22 µm filter designed to eliminate particles and microorganisms in an IV stream. Microvex is used for pediatric and ambulatory applications where minimizing hold up volume is critical. Nutrivex removes particles and microorganisms larger than 1.2 µm including *Candida albicans* in TNAs (total nutrient admixture). All these filtration products feature air elimination and can be incorporated with gravity and pump sets.
