

High Voltage Instruments Training

Associated Research offers extensive training and educational programs to help educate end users who may not have experience working with high voltage instruments. In addition, due to the specialized nature of compliance safety testing, engineers and technicians frequently have had little or no training using electrical safety testing instruments. These industry unique videos are designed to assist an end user in making the proper connections to a device under test in order to perform a test or to interconnect two Associated Research instruments. *Information:* www.asresearch.com/video.
