

## Coiled Cords

These coiled cords are designed for use in medical interconnect applications. The wide variety of cords offers flexibility and durability in the most demanding environments. Specifically designed for high performance applications, they are used with medical equipment, such as illuminators for cavity inspections, portable instruments, thermometers for measuring body temperatures, and body sensors for sleep disorder monitoring. Highly mobile coiled cords provide optimum retractile properties over a broad temperature range, giving the user a greater range of motion. The cords are available in a wide range of extended lengths, conductor counts, wire gauges to meet specific application needs.
