

Electrical Test Sets

Custom electrical test sets monitor and control a wide range of variables so that manufacturers of electrical products can accurately test their products. The Power Provider System line of custom products is designed to suit each customer's needs in the most reliable, economical, and versatile manner. Common uses include testing of electrical motors, compressors, pumps, power supplies, and lighting for variables such as accelerated service life testing, motor start-up/run-down/efficiency, in-rush amps, locked rotor amps, and capacity.
