

## Intermittent Motion Cartoner

The SI 10 intermittent motion cartoner features a short 3.8 m footprint. With a rated output of up to 165 cartons per minute, the SI 10 is capable of cartoning a wide range of products.

The CFR 21-compliant unit incorporates easily reproducible size changeovers and excellent accessibility allowing for dramatically reduced line clearance times. For added flexibility, standard and custom-engineered in-feed systems enable multiple components of varying sizes and shapes to be efficiently loaded into the same carton.
