

# Polymer Materials Website

The Plastics Web, a website from IDES Inc., a plastic materials information management company, is dedicated to providing information on polymer materials. Creation of the site has been a three-phase project. During the first phase, IDES populated the site with polymer content.

The second phase integrated the site with the Prospector database, which gives users access to 59,149 grades from 488 resin suppliers. The final phase is expected to be announced this fall.
