

## Thermistors/Probes

In response to high market demand for products that meet specialized application requirements, the customizable CS Series thermistors and CP Series probes are offered. These negative temperature coefficient thermistors and probes can be modified from the standard thermistor product line or completely custom designed. With virtually unlimited options in materials, configurations, connections, lead types, and lengths, they have versatile packaging options that provide labor savings cost economies, and value-added convenience for OEM manufacturers.
