

Tray Sealer

This high-speed tray sealer is designed for large volume operations requiring the utmost in precision, flexibility, and reliability. Built for the most demanding tray packaging environments, the T 450 can seal up to 150 standard trays per minute in a two-lane configuration. For operations using the T 450 to package various tray sizes, the machine is also designed for quick changeovers without tools, keeping downtime to a minimum. The high-speed machine is engineered with servo drives to guarantee vibration-free transport, so even liquids and very sensitive products can be packaged quickly and reliably. The basic T 450 is equipped with gas flush for modified atmosphere packaging, continuous feed conveyor, a tray transfer system, and a sealing die with an integrated cutting unit. A labeling system can also be added as an option.
