

## Water Purification

This cost-effective laboratory water purification system is designed for the clinical diagnostic market. The Elix Clinical system is designed for medium-sized clinical analyzers performing chemistry and immunochemistry assays. Consistent, high quality water significantly impacts the precision and sensitivity of laboratory test results.

According to the NCCLS/CLSI guidelines, several purification technologies should be combined to eliminate various contaminants. The Elix Clinical system's unique design combines prefiltration, softening, reverse osmosis, electrodeionization, polishing, and micro-filtration in one package.
