

CCD Camera (2409)

The MX12D Series is the next-generation of the MX12P camera, which has a large installed base in medical X-ray applications and is popular for machine vision applications due to its performance using frame transfer CCD technology. The MX12D emulates the functions of the MX12P in a smaller package and offers the image quality required for medical imaging with 65 dB dynamic range, 14-bit digital processing, and 1024 x 1024 resolution at 30 frames per second.
