

## EMI Shielding Air Filters

Need to meet EMI shielding and medical imaging equipment safety and reliability standards for critical air filter design applications? Air filters custom-designed to an application's exact standards are available for blood analyzers, CT and PET scanners, MRI units, x-ray machine, ultrasound devices, and many other medical products. All of them are designed to maximize air flow and lower air resistance to extend the life and dependability of vital medical electronics components.

Filters may be configured to include EMI shielding honeycomb, conductive gaskets, special metal finishes, tabs, handles, holes, flanges, spring clips, and other accessories to promote equipment compliance and ease installation.
