

Adhesive/Sealant

Polymer System UV15X-6 is an optically clear, flexible UV curable adhesive/sealant that fully qualifies to the USP class VI protocol. It is a single component special urethane formulation which is 100% reactive and does not contain any volatiles. This compound features cure on demand when exposed to UV light. Cure is not affected by air or moisture. The cured material exhibits high physical strength, excellent elongation properties, and high abrasive resistance. UV15X-6 features outstanding adhesion to many substrates including a wide range of plastics and elastomers.
