

Connector System (2705)

RoHS-compatible versions are available of the Conan 1.0 mm pitch, low-profile, board-stacking connector system. Designed to provide a mechanically secure, high-density electrical interface between parallel printed circuit boards, the Conan connector system—initially designed for use in mobile phones, pagers, and notebook PCs—performs well in medical electronics and instrumentation. Polarization features on the connector bodies prevent improper backwards mating of connectors at final assembly. The ample “lead-in” angles at the receptacle opening also contribute to easy and repeatable “blind mating” of connectors.
