

DC Brush Drive

The fully enclosed, compact ION DC brush drive is the second in a new family of high performance motion control drives providing network connectivity, power amplification, and advanced motion control features in a rugged, easy to use package. ION is available for DC brush, brushless DC, and microstepping motors, and is ideal for medical applications. Based on the high performance Magellan motion processor, the ION DC Brush Drive provides high-performance, low cost distributed control in an asynchronous serial network (RS485) version or a CANBus network version.
