

Tantalum Polymer Capacitors

Allowing design engineers to further reduce the size of portable electronic devices, these tantalum polymer capacitors deliver a high capacitance value capability. Designated the TCJ series, the capacitors are one to three capacitance value (CV) levels higher than other devices on the market. The capacitors offer an operating voltage up to 12 V, a 125°C operating temperature range, and guaranteed ESR. They can also withstand three times reflow profile up to 260°C and comply with RoHS requirements.
