

Fluoroplastic Introducers

Fluoroplastic tipped tubes are available to be used as IV or needle introducers. These tubes are designed with a tapered and/or beveled end to assist in the insertion of IVs and facilitate the transfer or extraction of fluids and can be laser marked for identification purposes. Sizes range from 3 FR up to 10 FR and are supplied in PTFE, FEP, or PFA, with FEP being the most common requested material. All products are USP Class VI compliant. Samples and literature are available upon request.
