

Custom Tubes/Rods

Custom manufactured surgical tubes and rods with burr-free custom slots, notches, cross-holes, multiple angles, and other complex features are available. Using high precision wire EDM processes, surgical tool components can be created that answer the need for next generation devices for minimally invasive cosmetic, orthopedic, cardiac, urological, and vascular procedures. With dimensional accuracy to ± 0.0005 in., the CNC wire EDM processes provide wide flexibility in creating tightly toleranced part features, yet are fast and cost effective in both small and large quantities.
