

## Liquid Silicone

Company continues to create customized liquid silicone solutions for the healthcare industry. Two liquid silicone products developed for molded applications where x-ray detection of materials is desirable includes LIM6041&#151a barium-sulfate filled, radio-opaque elastomer&#151and CLSR3030&#151a material that incorporates tungsten fillers into liquid silicone rubber, enabling more enhanced definition of parts under x-ray. GE's state-of-the-art Application Development Center and product customization facilities (photo) provide customers with rapid prototyping of materials and secondary processes.
