

## Compact Module

The performance of the Rexroth CKK and CKR compact modules is now available in a 200-mm wide extrusion utilizing two size 25 ball rail systems. Widely used for multi-axis pick-and-place systems in assembly environments and dispensing operations in the medical industry, these electromechanical actuators bring their speed, precision, and heavy payload capability to larger scale applications. The dual Ball Rail System linear guides, and in the case of the CKK, the Rexroth Ball Screw, ensure high system rigidity to move heavy payloads or complex end-of-axis tooling with extreme precision.
