

Flat Wireform Jumpers

The RoHS-compliant FJ Series of ultra-low profile jumpers is available. Specifically developed to ensure the reliability, functionality, and integrity of interconnect traces on multi-function printed circuit boards, the SMT jumpers are flat wireforms featuring a minimal profile. The devices require no insulation and are offered in standard EIA case sizes 0805 and 1206 to provide the utmost in board space conservation, together with manufacturing and applied cost efficiencies. Due to their unique design, the FJs are ideal alternatives to zero-ohm resistors. Boasting excellent stability and cleaning properties, the jumpers' construction further supports the most prevalent high-volume placement equipment and solder reflow processes.
