

Laminar Flow Clean Bench

The Series 305 horizontal laminar flow clean bench features a stainless steel table top with a white painted-steel shell, front access, and interior lighting. Models are available for Class 100 or Class 10 environments. Bench length and height will depend on the specific process it is used for, but standard floor to table top height is 30 in. Standard widths are 2-1/2 in. over nominal 3, 4, 5, 6, and 8 increments and the interior depth (interior table or working space) of 21.5 in. The overall cabinet width, depth, and height will depend on the size of unit chosen.
