

Self-Clinching Access Hardware

PEM Type PF50/60 self-clinching access hardware incorporates a captive screw in a spring-loaded assembly to keep parts to a minimum and prevent screws from falling out and damaging internal components. These panel fastener assemblies subsequently allow for quick and easy access to components whenever necessary. The hardware meets UL 508 “operator access area” requirements (Type PF50) and UL 1950 “service access area” requirements (Type PF60). Both types are RoHS compliant.
