

UV Resistant Tubing

Fluoropolymer tubing products are available for a variety of fluid handling applications. Unique characteristics of fluoropolymer tubing include exceptional heat and UV resistance, as well as an extremely low coefficient of friction. In addition, the products can operate in temperatures as high as 500°°F and are chemically inert, making them ideal for harsh environments where chemicals and corrosion are present. Custom and standard sized tubes ranging from 0.004 in. ID up to 4.0 in. ID are available in TexFluor PTFE, FEP, MFA, and PFA.
