

Microminiature Connectors

Specific part numbers of the company's connector line are available at a lead time of two to three weeks. This program extends upon the recently announced ability to offer approximately 1,500 part numbers at a standard four- to six-week lead-time. This reduced lead time will provide extended service capability to meet the demanding requirements of customers. The microminiature connector line consists of rectangular, circular, quick disconnect, high-speed signal, filter, hermetic, mixed signal packages, and strip style interconnects. Each product features the twist pin contact system, and has unique mechanical engagement and locking mechanisms to meet the demands of harsh environment applications.
