## **Adapters (3713)**

To maximize usability, turnable metal threaded rings have been added to both ends of the 765/768 series M8 to M12 adapters. This change allows easier mating of connecting cables. The 765 series adapters are available in 3 and 4 pole versions and in a variety of configurations. The standard adapters are sealed to IP67 in the mated and locked condition. The overall length is 50 mm with an outer diameter of only 14.5 mm. Adapters mate with standard M8 and M12 connecting cables.
